

Mobility-as-a-Service (MaaS) for Dublin

Alan Murphy
Smart Dublin Regional Manager

1. Introductions

2. What is MaaS?

3. MaaS in Ireland – the key enablers

4. Key Takeaways

Smart Dublin is an initiative of the four Dublin Local Authorities

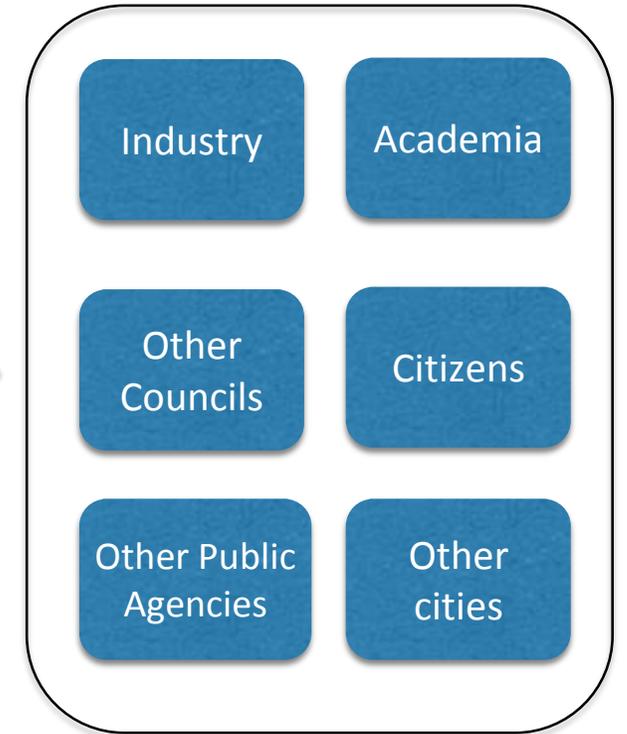

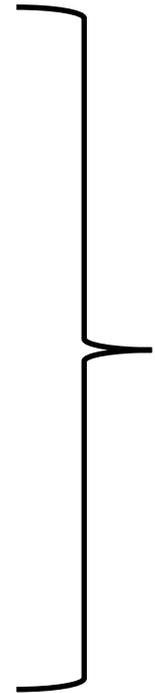

To engage with Technology providers, Researchers and Citizens to address urban challenges and improve quality of life.

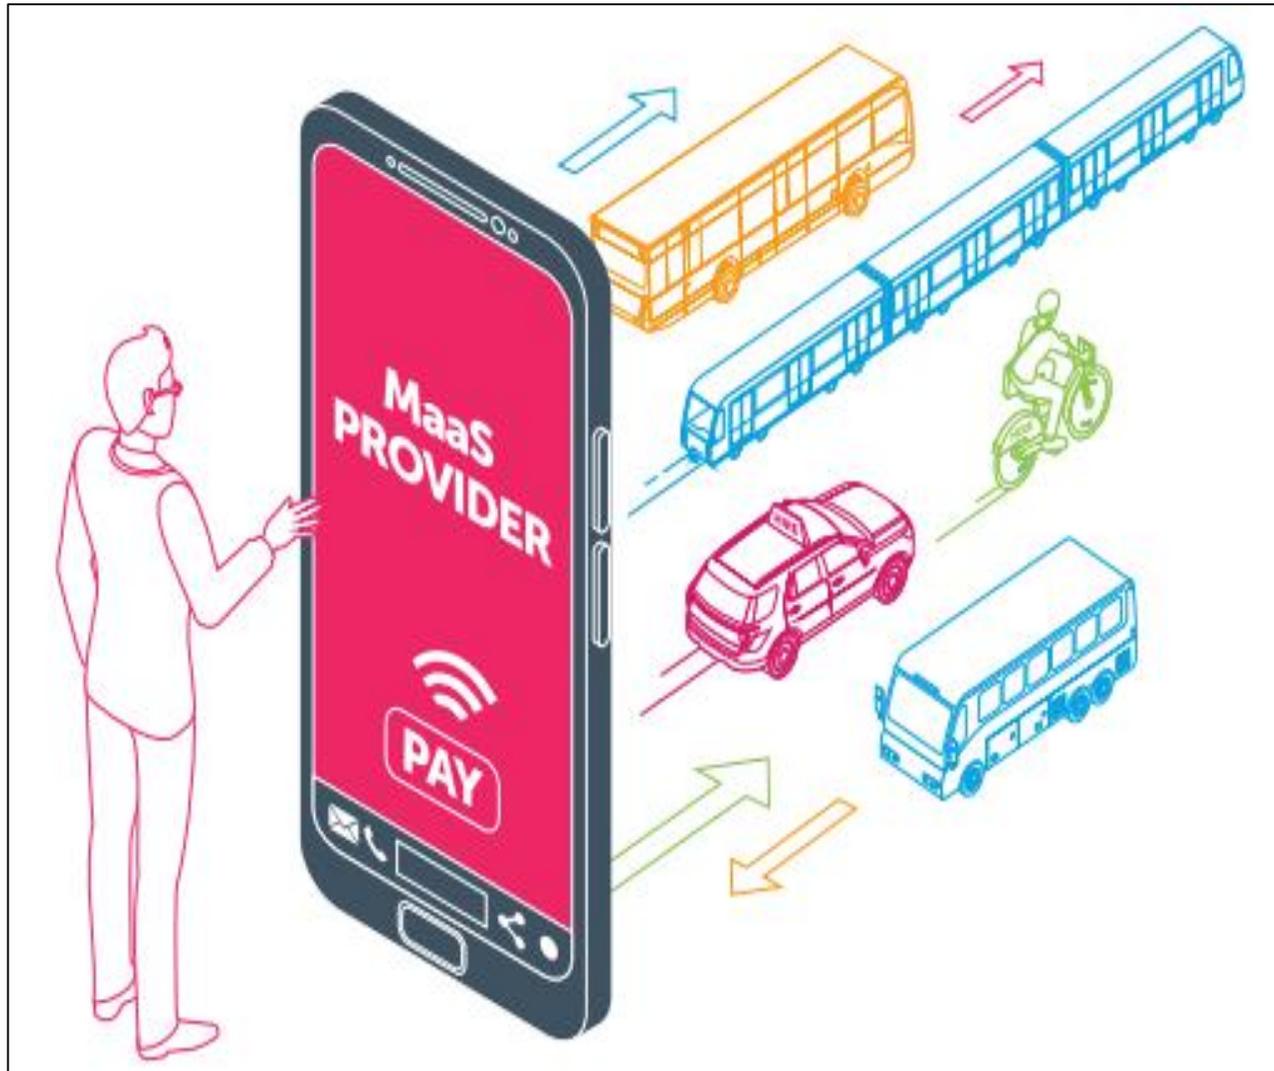

Smart Dublin acts as the Innovation Catalyst amongst many stakeholders to tackle complex urban challenges

- Sustainable Mobility
- Environmental
- Energy Efficiency
- Connectivity
- Citizen Engagement
- Open Data
- Tourism

What is MaaS?

Mobility as a Service (MaaS)
...a shift away from personally-owned transportation towards mobility solutions that are consumed as a service.

...the 'Netflix' of passenger transport

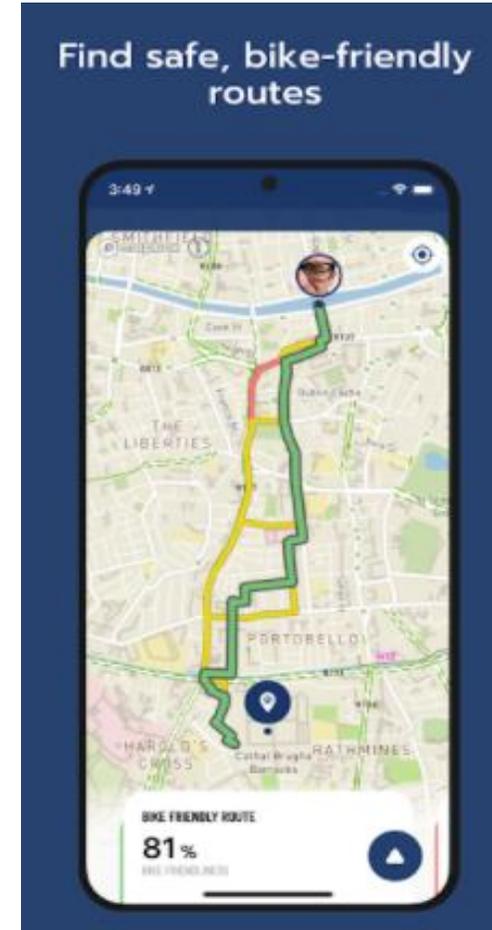

...much more than just a Journey Planner

The right information to the right person at the right time is already happening albeit in silos...

| Howth Dublin Connolly | | ☆ |

A Problem Statement and how MaaS addresses each point whilst delivering benefits to society

IRELAND CLIMATE CHANGE ADVISORY COUNCIL | ANNUAL REVIEW SEPT 2020

“Public transport competes directly with the private car. At present, **public transport** is often seen as less attractive in terms of **direct cost, perceived convenience or comfort**. Greater innovation is required to address this disparity on all three fronts.”

1. Direct Cost

- Allows a move away from high ownership costs to consume a mobility service only when needed (e.g.) via subscription, PAYG models.

✓ reduced road congestion

2. Perceived Convenience

- More customer choice by access to diverse modes of preference.
- Offering one stop-shop journey planning, ticketing and payment process.
- Reduced journey times (e.g. bus corridors, active travel modes).

✓ improved physical health by encouraging active modes of travel

3. Comfort

- If the user prefers, the (EV) car has a role to play in MaaS:
 - Shared, Shared Autonomous, Private

✓ improved air quality

1. Introductions

2. What is MaaS?

3. MaaS in Ireland – the key enablers

4. Key Takeaways

MaaS (the Software) needs Hardware – good infrastructure

Dart extension to Drogheda and increased capacity promised in new rail plan

A public consultation will now take place as part of plans for the Dart+ West programme.

MaaS (the Software) needs Hardware – a diversity of modes

MaaS (the Software) needs Hardware – an integration of modes

Mobility as a Service (MaaS)

*...is the **digital** integration of transport services in conjunction with the **hardware** integration of transport services*

*Mobility Hubs are an example of the **hardware** needed to complement MaaS*

MaaS needs innovation via collaboration

Learn from other cities/countries

Public-Led Stakeholder Collaboration

Scope – National?

Define Vision & Objectives

Target Operating Model

User Expectations

Data

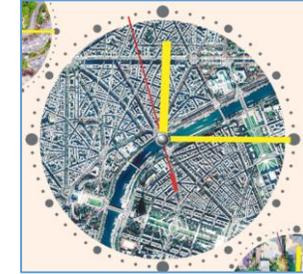

Policy & Regulation

Ticketing & Payment

Technology

Key Takeaways

1. Traditional mobility behaviour is being seriously questioned
 - Covid19
 - The 15 minute city
2. Mobility is becoming more diverse, personalised, integrated.
3. The EV has a role to play in MaaS
 - Shared
 - Shared Autonomous
 - Private
4. Key enablers of infrastructure are in place or in the pipeline
5. There is a real appetite amongst stakeholders to explore MaaS for Ireland & steps are already underway.
